

Response to the Comments Given by the Reviewers of Manuscript: CONFERENCE-XXX, Minor Revision

(The Name of the Title is Hope)

Dear Reviewers,

Thank you for the constructive reviews and recommendations for improving the manuscript. We have greatly benefited from all the comments and suggestions. Following the comments, we have made minor revisions to our manuscript and summarized our responses below. We are happy to answer any further questions that might arise.

Thank you very much for your time and kind consideration.

Yours sincerely,
Anonymous Authors

Use `\manuscriptid{<id>}` to set the Manuscript ID.

Use `\papertitle{<title>}` to set the title of the paper.

Use `\authornames{<names>}` to set the author names. This is optional when using the anonymous option in `\documentclass`. Note: For double-anonymous venues, do not forget to use the anonymous option.

Use `\letterbody{<body>}` to customize the introductory letter. This is optional.

Use `\maketitle` right after `\begin{document}`.

Response to Meta-Review's Comments

Comments: To create the Meta-Review section, use

`\metareview`

To create the Meta-Review block and its responses, use

`\meta[<comments>]{<responses>}`

Response: This is the response to the Associate Editors' Comments.

Response to Reviewer #1's Comments

R1.C1: To create the Reviewer sections:

Use `\reviewer` for automatic numbering (Reviewer #1, Reviewer #2, etc.).

Use `\reviewer[<ID>]` for a custom ID.

For example, for submissions to journals like TOSEM, you can use `\reviewer`, while for submissions to conferences hosted on HotCRP, you can use `\reviewer[#123A]`.

Response: To create a comment block and its response, use

`\response[<comments>]{<responses>}`

The responses are always numbered sequentially. To label a response, use `\label{}` either at the end of the comment or at the end of the response.

R1.C2: This comment consists of the following points:

1. This is the first point.
2. This is the second point.

Response: This is a response to the second comment from Reviewer 1.

- The comments and responses support `enumerate` and `itemize` environments.
-

Response to Reviewer #123B's Comments

R2.C1: This is the comment from Reviewer #123B.

Response: Here, we reference **R1.C1**. To make a reference to the response of a comment, use `\ref{}`.
